PROFESSIONAL SUMMARY

Software Engineer II with 3+ years of experience building automation frameworks and DevOps-integrated test pipelines for enterprise SaaS platforms. Skilled in Java, Selenium WebDriver, Playwright, TestNG, Maven, and Rest Assured. Owns Jenkins CI/CD pipelines end-to-end and uses AI-assisted tools daily to accelerate test generation, code review, and root-cause analysis. Strong background in IAM/SCIM platform testing, PostgreSQL backend validation, and Agile cross-functional collaboration.

TECHNICAL SKILLS

Programming Languages: Java, C++, Python (working knowledge), SQL, Data Structures and Algorithms, OOP

Test Automation: Selenium WebDriver, Playwright, TestNG, Maven, Appium (basic), Page Object Model

API Testing: Rest Assured, Postman, contract-based endpoint validation

CI/CD and DevOps: Jenkins Pipelines, Git, GitHub, Shell Scripting, Linux/Unix

Databases: PostgreSQL, MySQL, query debugging and data validation

IAM and Domain: SCIM 2.0, IAM, Identity Lifecycle, PACS, Guardian HSC, VIM

AI-Assisted Engineering: Claude, ChatGPT for test generation and root-cause analysis

Project Management: JIRA, Zephyr, Agile/Scrum, cross-team communication

PROFESSIONAL EXPERIENCE

Software Engineer II – QA Automation | Alert Enterprise

April 2023 – Present

- Design and maintain Java, Selenium, TestNG, and Maven automation frameworks across enterprise SaaS modules using Page Object Model for scalability and reuse.
- Build API automation with Rest Assured and Playwright, validating provisioning and workflow endpoints against documented contracts.
- Own Jenkins CI/CD pipelines end-to-end, deploying builds to VM environments and gating deployments on automated regression results.
- Built an end-to-end build verification pipeline that reduced build validation time from 3 to 4 days of manual testing to 3 hours.
- Automated 300+ regression test scenarios across enterprise modules, reducing manual regression effort and accelerating release cycles.
- Perform backend validation using PostgreSQL to verify data mapping, integrity, and system triggers.
- Use AI-assisted tools including Claude and ChatGPT daily for test-case generation and root-cause analysis, validating all output before committing.
- Analyze test failures to root cause, distinguishing product defects from automation issues, and work with engineering teams through resolution.
- Collaborate with cross-functional and senior engineering teams under Agile/Scrum across multiple enterprise client engagements in financial services and healthcare.

Subject Matter Expert (Part-time) | Chegg India

June 2022 – December 2023

- Resolved 150 to 200 programming queries per month on coding, data structures, algorithms, and DBMS.
- Simplified complex problem statements and guided learners through debugging and logical reasoning.

Software Engineer Intern | TexAu

April 2022

- Gained hands-on exposure to Git, GitHub, scripting workflows, code testing, and issue tracking.
- Collaborated with engineering teams to monitor automation tasks and validate feature behavior.

KEY PROJECTS**Enterprise Identity and Access Automation Suite**

- Automated full identity and access lifecycle workflows including onboarding, offboarding, and badge access assignment with fresh test data per execution, eliminating manual file creation.
- Built end-to-end connector validation covering provisioning status and failure detection, improving delivery efficiency by approximately 90 percent.

Healthcare Automation – Patient and Visitor Lifecycle

- Automated the admission-to-discharge lifecycle via API and UI testing across 90 use cases and 250+ test cases.
- Cut manual execution time from 2 to 3 days down to 3.5 hours with automated reporting shared with all stakeholders.

Access Governance Automation

- Automated identity governance lifecycle operations including onboarding, attribute updates, and deprovisioning against documented API contracts.
- Achieved approximately 80 percent automation coverage and reduced regression cycle time by approximately 65 percent.

CERTIFICATIONS

- Coursera: Java Programming and Software Engineering
- Coursera: Selenium Test Automation
- Coursera: API Testing with Rest Assured
- Coursera: Data Structures and Algorithms Specialization

EDUCATION**Chandigarh Group of Colleges**

August 2019 – June 2023

B.Tech in Computer Science and Engineering | CGPA: 7.7 / 10

Kendriya Vidyalaya No. 1, Kota

2019

Class XII | 72 percent

Kendriya Vidyalaya, Mathura Cantt

2016

Class X | CGPA: 10 / 10
